

Business Requirement Analysis

Project Title: Online Food Ordering System

1. Introduction:

The Online Food Ordering System is a database application that allows customers to order pizzas and other food items online. The system manages customer details, menu items, orders, payments, and deliveries. It provides a convenient way for customers to place orders while helping Domino's efficiently manage its business operations.

2. Purpose:

The main purpose of this system is to:

- Provide customers with a fast and easy online ordering experience.
- Maintain customer and menu information in a secure database.
- Process food orders accurately and efficiently.
- Manage online payments and cash-on-delivery orders.
- Track order preparation and delivery status.
- Help administrators manage menu items, customers, orders, and reports.

3. Business Requirements:

The system should be able to:

- Allow customers to register and log in.
- Display the complete food menu with prices.
- Allow customers to customize pizzas (size, crust, toppings, etc.).
- Add items to the shopping cart.
- Place and confirm orders.
- Process online and offline payments.
- Assign delivery personnel to orders.
- Track the status of each order.
- Allow customers to view their order history.
- Enable administrators to manage menu items, customers, and orders.

- Allow customers to submit ratings and reviews for completed orders and menu items.
- Display customer ratings and reviews for menu items.

4. Functions / Operations on the Data :

Customer Management :

- Customer Registration
- Customer Login
- Update Customer Profile
- View Customer Details
- Delete Customer Account

Menu Management :

- Add Menu Items
- Update Menu Items
- Delete Menu Items
- Search Food Items
- View Menu Categories

Order Management:

- Place New Order
- Modify Order Before Confirmation
- Cancel Order
- View Order Details
- View Order History
- Update Order Status

Cart Management:

- Add Items to Cart

- Update Item Quantity
- Remove Items from Cart
- View Shopping Cart

Payment Management:

- Record Payment
- Verify Payment Status
- Generate Payment Receipt
- Process Refund (if applicable)

Delivery Management:

- Assign Delivery Partner
- Update Delivery Status
- Track Delivery
- Confirm Delivery Completion

Inventory Management:

- Update Ingredient Stock
- Check Availability of Menu Items
- Maintain Stock Records
- Administrator Management
- Admin Login
- Manage Customers
- Manage Menu Items
- Manage Orders
- Manage Payments
- Generate Sales Reports

Review and Rating Management :

- Submit Rating (1–5 Stars)

- Write Customer Review
- View Ratings and Reviews
- Edit Review (within the allowed time)
- Delete Review
- Calculate Average Rating for Menu Items
- Admin Review Moderation (approve/remove inappropriate reviews)

5. Expected Output:

The system should provide:

- Customer account details
- Menu and food item information
- Order confirmation
- Payment confirmation
- Delivery tracking information
- Order history
- Customer ratings and reviews for menu items
- Average rating of each menu item
- Daily and monthly sales reports

Project overview:

The Online Food Ordering System is designed to simplify the online food ordering process while improving restaurant operations. By managing customer, menu, order, payment, delivery, review, and rating information in a centralized database, the system ensures accurate order processing, faster service, valuable customer feedback, and better customer satisfaction. Reviews and ratings also help customers make informed choices and enable Domino's to improve the quality of its products and services.
